

IN THE SPECIFICATION

Please replace ¶[0016] of the published application with the following amended paragraph:

[0016] Drive shaft 16 extends upwardly through the driven member assembly which includes what is referred to as a head portion 24. A workpiece 26 is mounted on the extending end of drive shaft 16. In the embodiment shown, workpiece 26 includes a mounting arm 28 and a brushhead 30. A base part 19 of drive shaft 16 is connected by two flat spring members 32 and 34 to head portion 24. This arrangement results in the conversion of the side-to-side motion of the rear end of drive shaft 16 provided by electromagnetic driver 13 to an arcuate motion over a defined angle, e.g. 8-14.degree.. Such a structure is described in detail in pending U.S. patent application Ser. No. 10/137,962 7,067,945, owned by the assignee of the present invention, the contents of which are incorporated by reference. The arcuate action of drive shaft 16 results in a torque on the head portion 24 through the two spring members 32 and 34.
